EXPERIENCE

Southlike Software 2023 – Present
Founder
Boutique AI automation agency for businesses. Agents, workflow automation and systems that connect AI to the real world. Not chatbots answering questions: systems that do the work on their own.

ADP 2026 – Present
Developer
Promoted to own more of the billing platform. Same mission-critical systems, wider scope: I drive improvements across the pipelines and services I built, and carry more of the architecture and reliability decisions for the team.

- Keep raising invoice-data accuracy and closing the remaining revenue-leakage gaps.
- Build AI tooling and workflows that help the team ship better and faster.

ADP May 2024 – 2026
Associate Developer
Mission-critical payment and billing systems for a global marketplace. Event-driven architectures built to scale.

- Led a billing data-refinement pipeline end to end over two quarters: requirements, data modeling, architecture and implementation. It fixed a revenue-leakage problem caused by unknown customer status across multiple sources of truth.
- Result: 60% better invoice-data accuracy and over $1M in annual revenue recovered.
- Built big-data export pipelines with Databricks feeding the transactional database, cutting query time from 11 s to 100 ms.
- Refactored the backend with retry and failover, and monitored production through Splunk.

ADP Aug 2022 – May 2024
Developer, internship
Worked with a global team maintaining and modernizing a microservices ecosystem in Node.js.

- Upgraded dependencies and refactored codebases to current standards.
- Helped move infrastructure from VMs to Kubernetes, containerizing and testing the components of an entire business domain.

EDUCATION

PUCRS
Software Engineering
Studied software engineering in Porto Alegre.

SKILLS

TypeScript, Node.js, Next.js / React, Tailwind, AI SDK & agent workflows, Docker, AWS, Databricks, Event-driven architecture

LANGUAGES

Portuguese (native), English (fluent)
